

Goals

- Create simple UI with Java

All class files should have the Java doc at the top, including your student name.
Name – student number

Submission:

ZIP file **Labw8.zip** containing the project files.

Upload all the files zipped (.zip) to the Learning Hub under
Activities -> Assignments -> Labw8

Submit just Zip files, any other types of archives will be rejected.

All submissions should be complete, should contain all files.

Please complete the following:

This Lab considers that a text file **Info.txt** exists in the current directory.

- Create a new Java project in your IDE.
- Create a new class called "FileReaderGUI" and make it extend JFrame.
- In the FileReaderGUI class, add the following components:
 - A JLabel with the text "Click the button to display the file contents"
 - A JButton with the text "Display File Contents"
 - A JList for displaying the contents of the file line by line
- In the FileReaderGUI class, create a method called "readFile" that takes in a file path as a parameter. This method should read the contents of the file and return them as a List of Strings.
- In the FileReaderGUI class, add an action listener to the button. When the button is clicked, call the readFile method and pass in the file path. Then, set the contents of the JList to the returned List of Strings from the readFile method.
- In the main method of the FileReaderGUI class, create a new instance of the FileReaderGUI class and set the visibility to true.
- Test the program by running it and making sure the contents of the file are displayed in the JList when the button is clicked.

	Marks	
All classes are implemented and the UI is as expected	8	
Coding standards are applied, including Java docs for classes and methods, submission as requested.	2	
Total	10
